## Getting Started

---

Thank you for buying the K8090/VM8090 8-Channel Relay Card! This document will guide you through the necessary steps to install the board on your system.

### Plugging in your board for the first time

First, you will need to plug your K8090 into an available USB (1.1/2.0) port on your computer so Windows can detect this new device. The step and information covered in this guide are also applicable to the VM8090 which is the pre-built version of the K8090.

Choose your operating system for help installing your hardware:

- Windows 2000/NT/XP(32/64 bit)
- Windows 7 (32/64 bit)

Note that you need administrative privileges to install new hardware.

# Hardware Installation

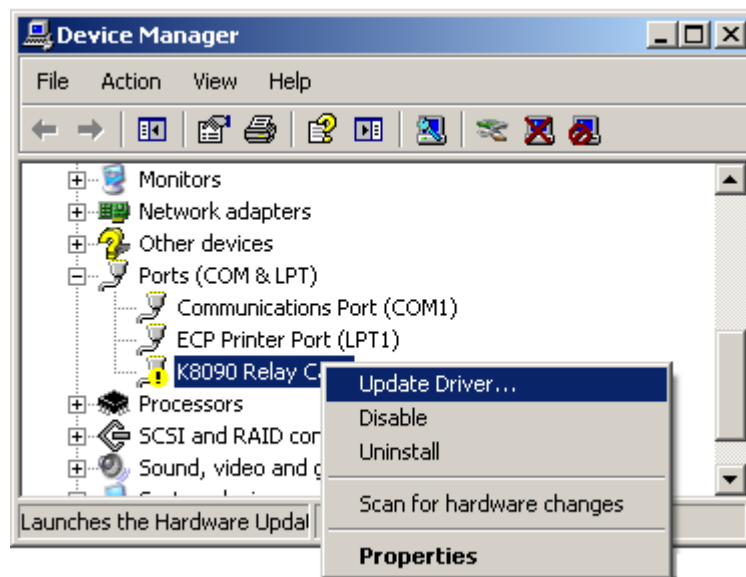

---

## Windows 2000/NT/XP(32/64 bit)

After you've plugged in your device you should be prompted with the Windows *'Found New Hardware Wizard'*.

If the wizard did not open, you can open it manually through the following steps:

- Click **Start -> Run..**
- Type **devmgmt.msc** and press **OK**
- Search for a 'K8090 Relay Card' entry under the *Ports* category
- Right-click the entry and click **Update Driver..**

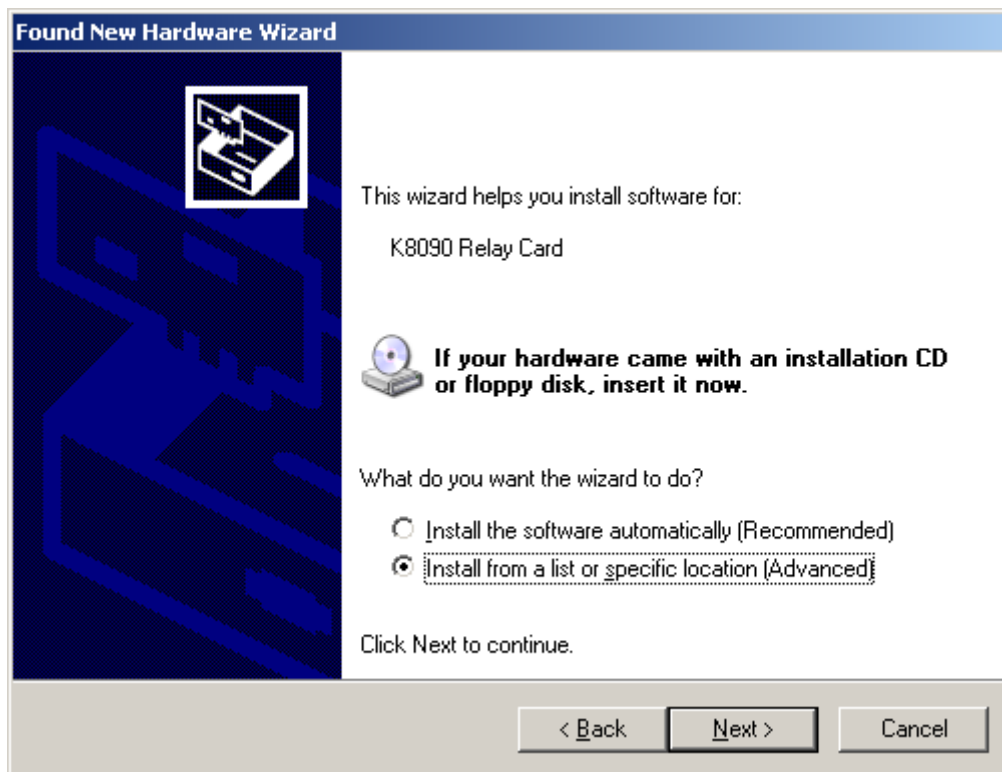

You should now be prompted with the '**Found New Hardware Wizard**'.

Select '**No, not this time**' and click '**Next**' to continue.

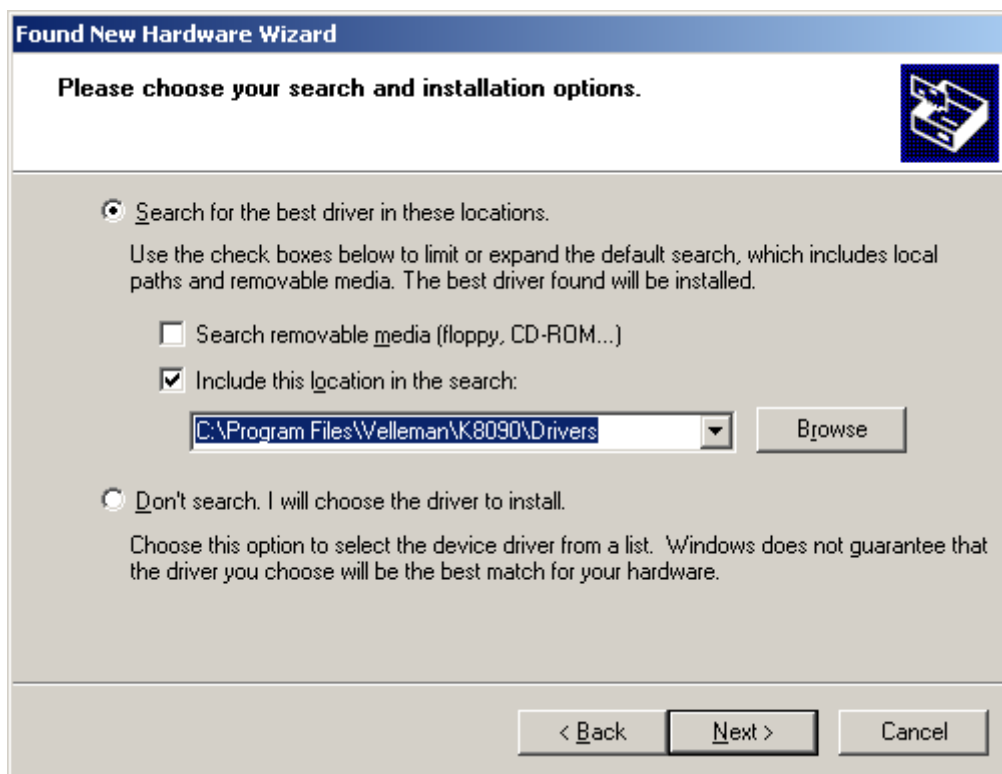

Then select '**Install from a list or specific location (Advanced)**'.

Click '**Next**' to continue.

## K8090/VM110 Getting Started

You will be asked for the location of your driver files. Complete the dialog as indicated below.

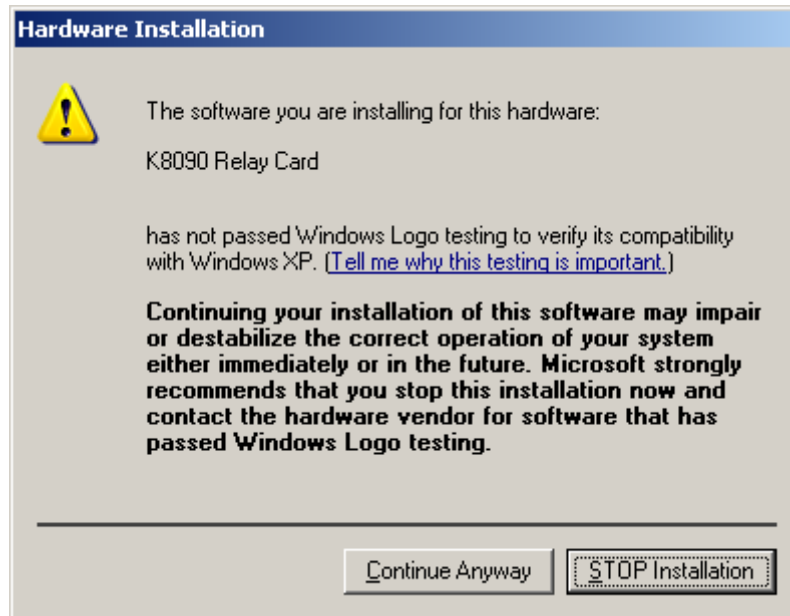

Driver files were included in your installation. Under '**Include this location in the search**', enter the location of the driver files. For a default installation this path is:

C:\Program Files\Velleman\K8090\Drivers

Click '**Next**' to continue.

## K8090/VM110 Getting Started

If you receive a warning, click '**Continue Anyway**'. This cannot harm your computer since it is safe to use our driver. Make sure you downloaded the driver or installation package from the Velleman website.

## K8090/VM110 Getting Started

Installation should now be complete. You are ready to use the board.

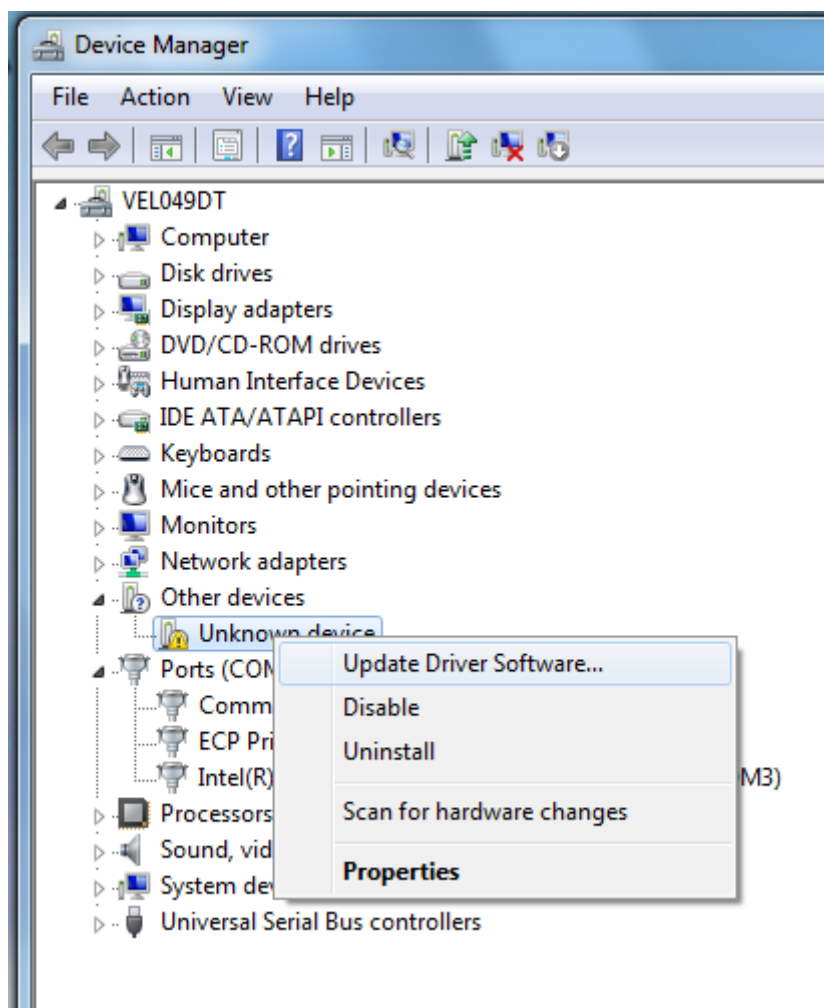

Continue to the chapter Running the K8090 Demo application to continue.

## Windows 7 (32/64 bit)

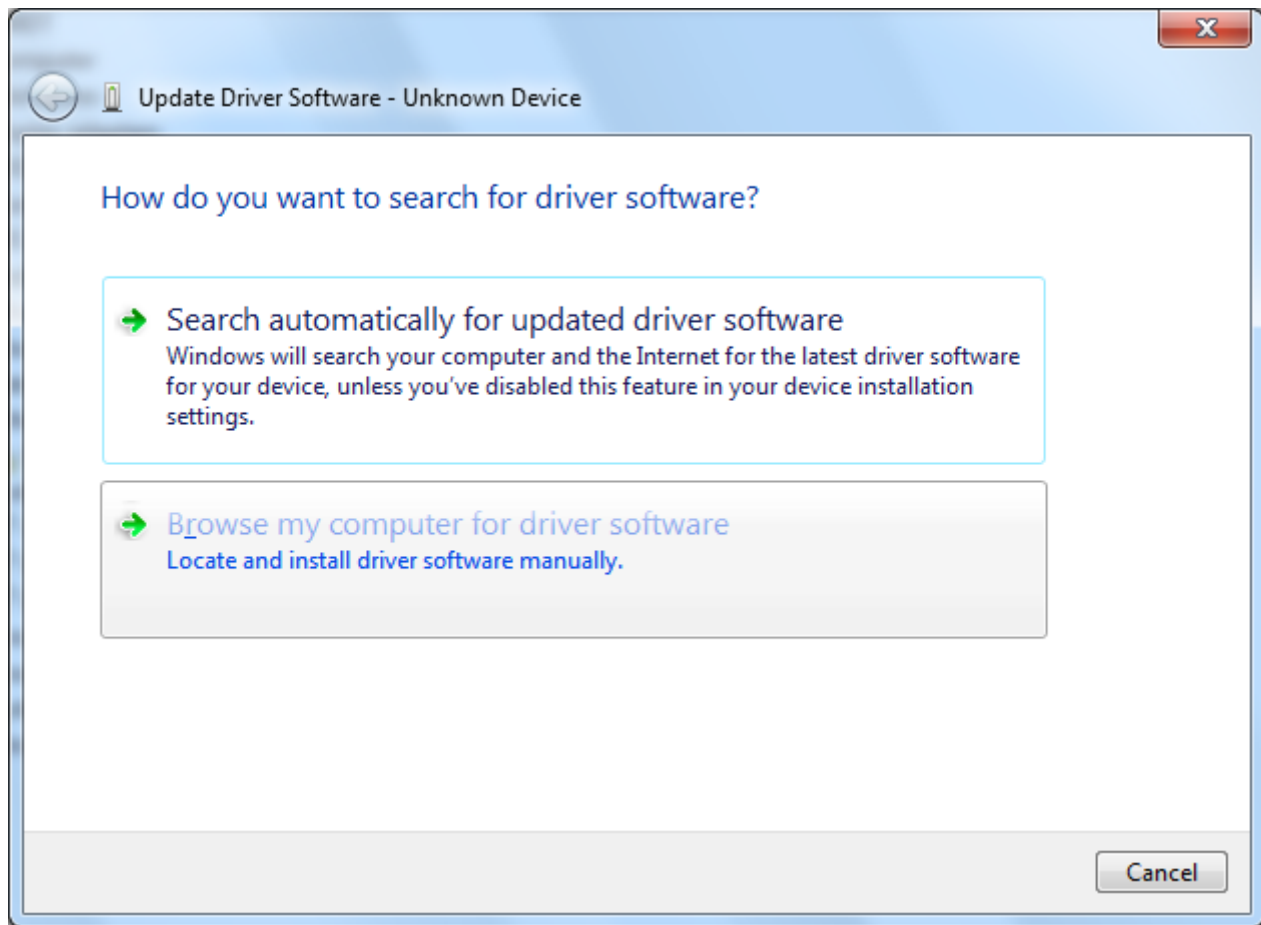

After you've plugged in your device you should be prompted with the Windows *'Found New Hardware Wizard'*.

If the wizard did not open, you can open it manually through the following steps:

- Press the **Windows key + R**
- Type **devmgmt.msc** and press **OK**
- Search for a 'K8090 Relay Card' entry under the *Ports* category
- Right-click the entry and click **Update Driver..**

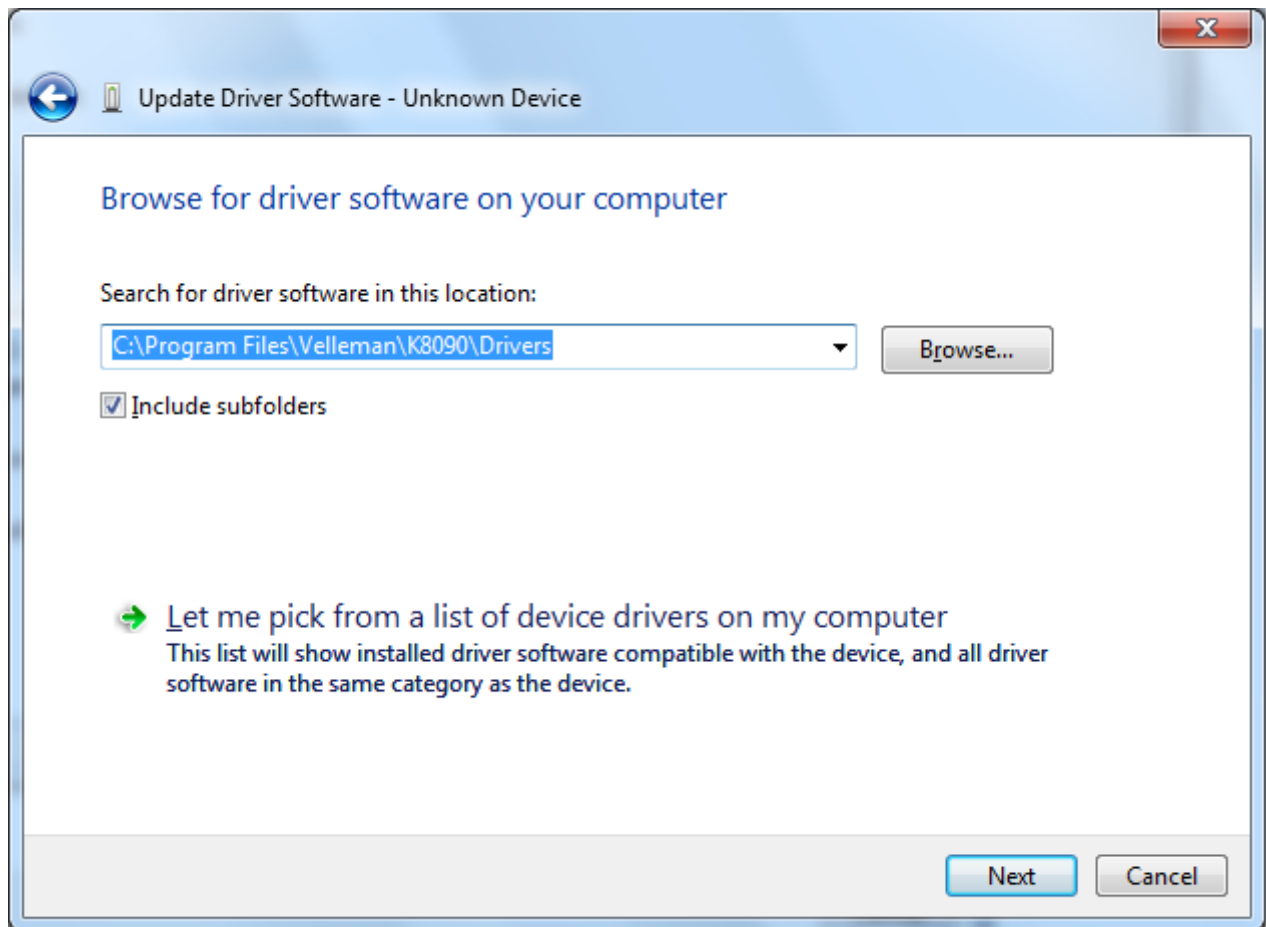

You should now be prompted with the '**Update Driver Software**' dialog.

Select '**Browse my computer for driver software**'.

You will be asked for the location of your driver files. Complete the dialog as indicated below.

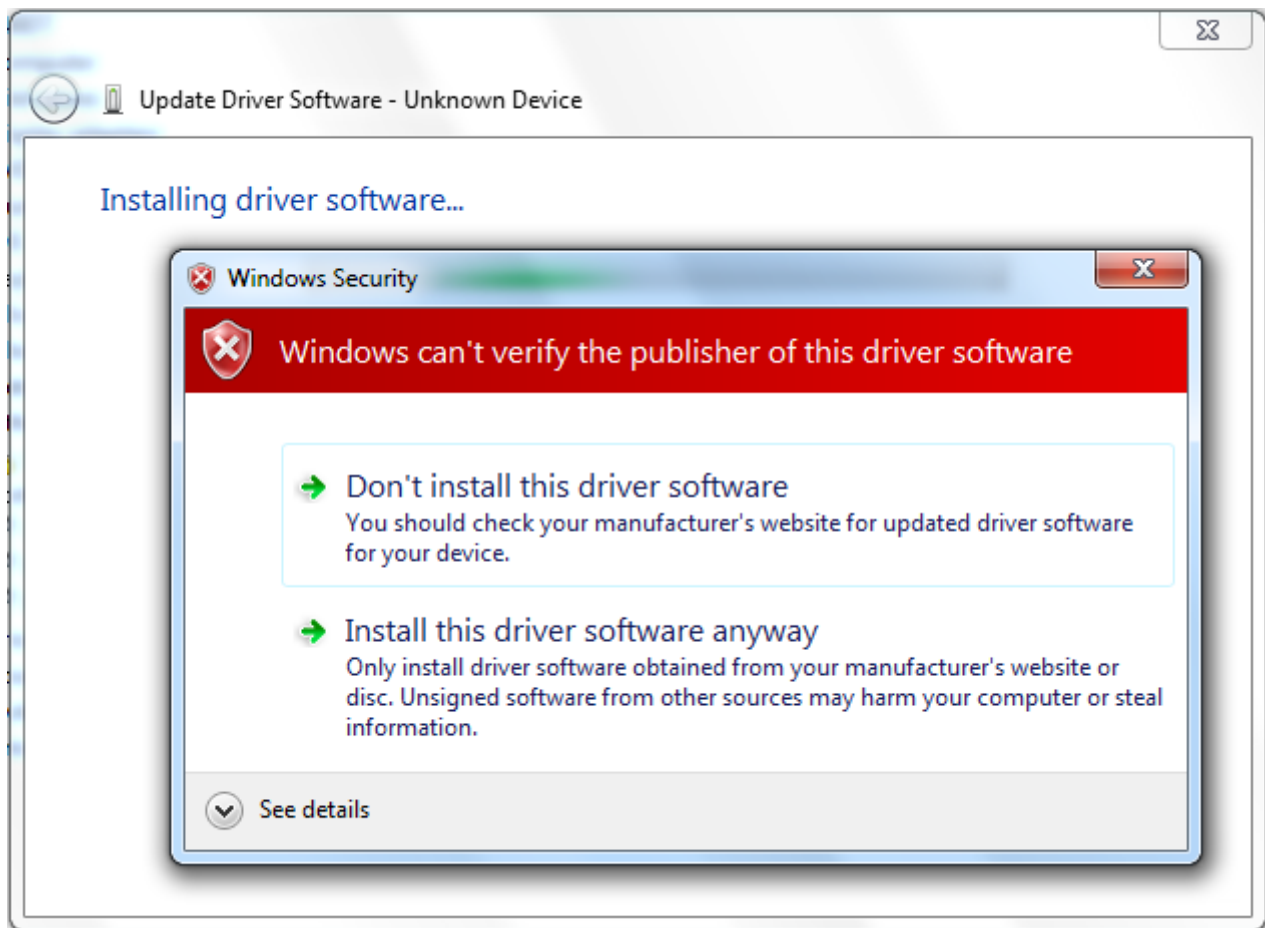

Driver files were included in your installation. Under '**Include this location in the search**', enter the location of the driver files. For a default installation this path is:

C:\Program Files\Velleman\K8090\Drivers

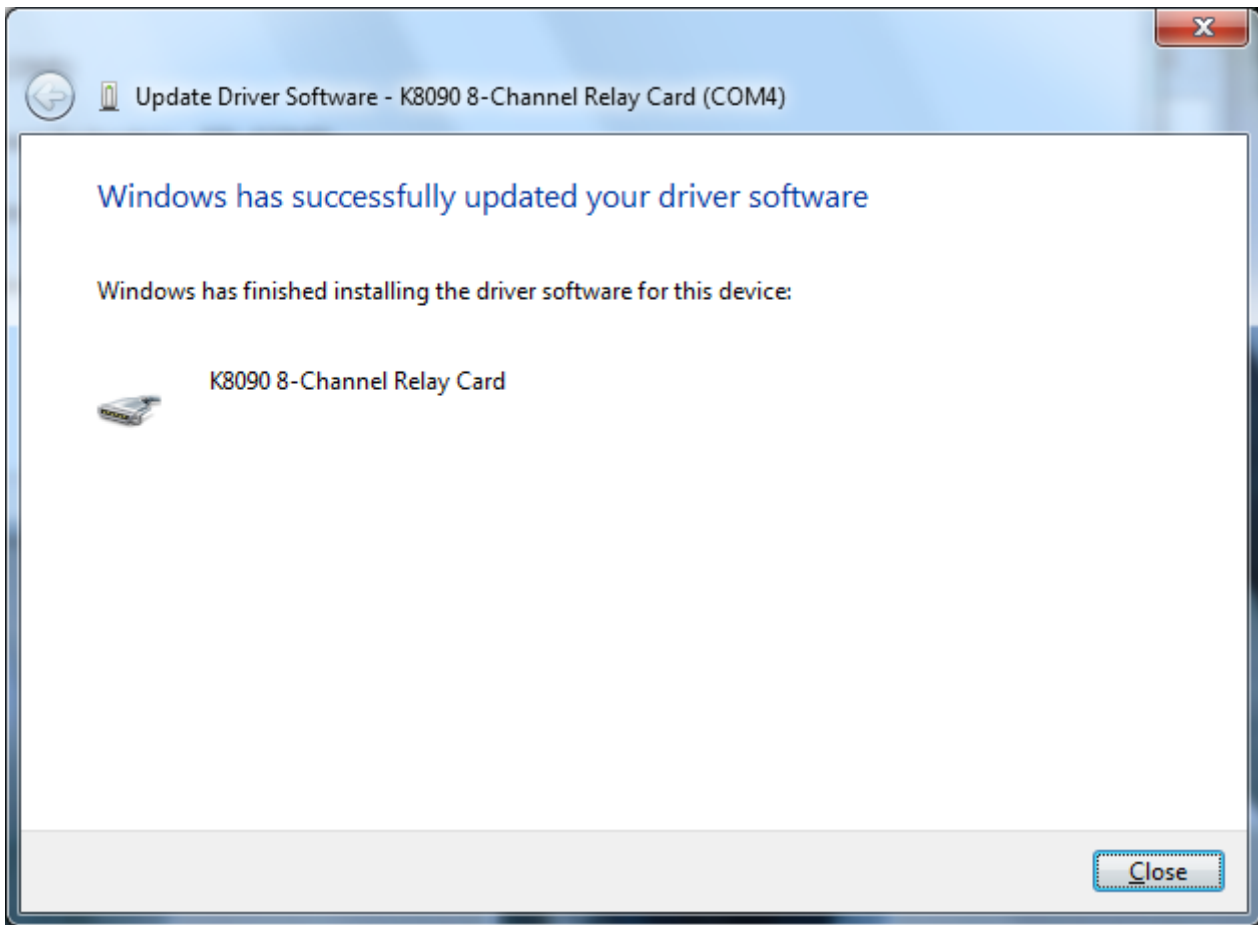

Click '**Next**' to continue.

If you receive a warning, click '**Install this driver software anyway**'. This cannot harm your computer since it is safe to use our driver. Make sure you downloaded the driver or installation package from the Velleman website.

## K8090/VM110 Getting Started

Installation should now be complete. You are ready to use the board.

Continue to the chapter Running the K8090 Demo application to continue.

## Running the K8090 Demo application

---

This installation comes with a ready to use standalone demo application to be able to test your board. The demo application has been installed in the Demo folder of your installation directory.

You can run the demo through the following steps:

- Click **Start**
- Select Programs > Velleman > K8090 > **K8090 Demo**

By default the demo application is located under C:\Program Files\Velleman\K8090\Demo

## Developing your own software

---

The K8090 8-Channel Relay Card comes with a library (dll) that can be used to communicate with the board in any programming language. This installation comes with some examples on how to use this dll in some of the most popular programming languages.

At this time the following programming languages / environments are supported:

- Microsoft Visual Basic 2008 Express Edition

### Microsoft Visual Basic 2008 Express Edition

This installation comes with examples and a guide on how to develop application for the K8090 in Visual Basic 2008 Express Edition. Click Start > Programs > Velleman > K8090 > Samples > Developer's Guide (PDF) to get started.

## Technical Support

---
